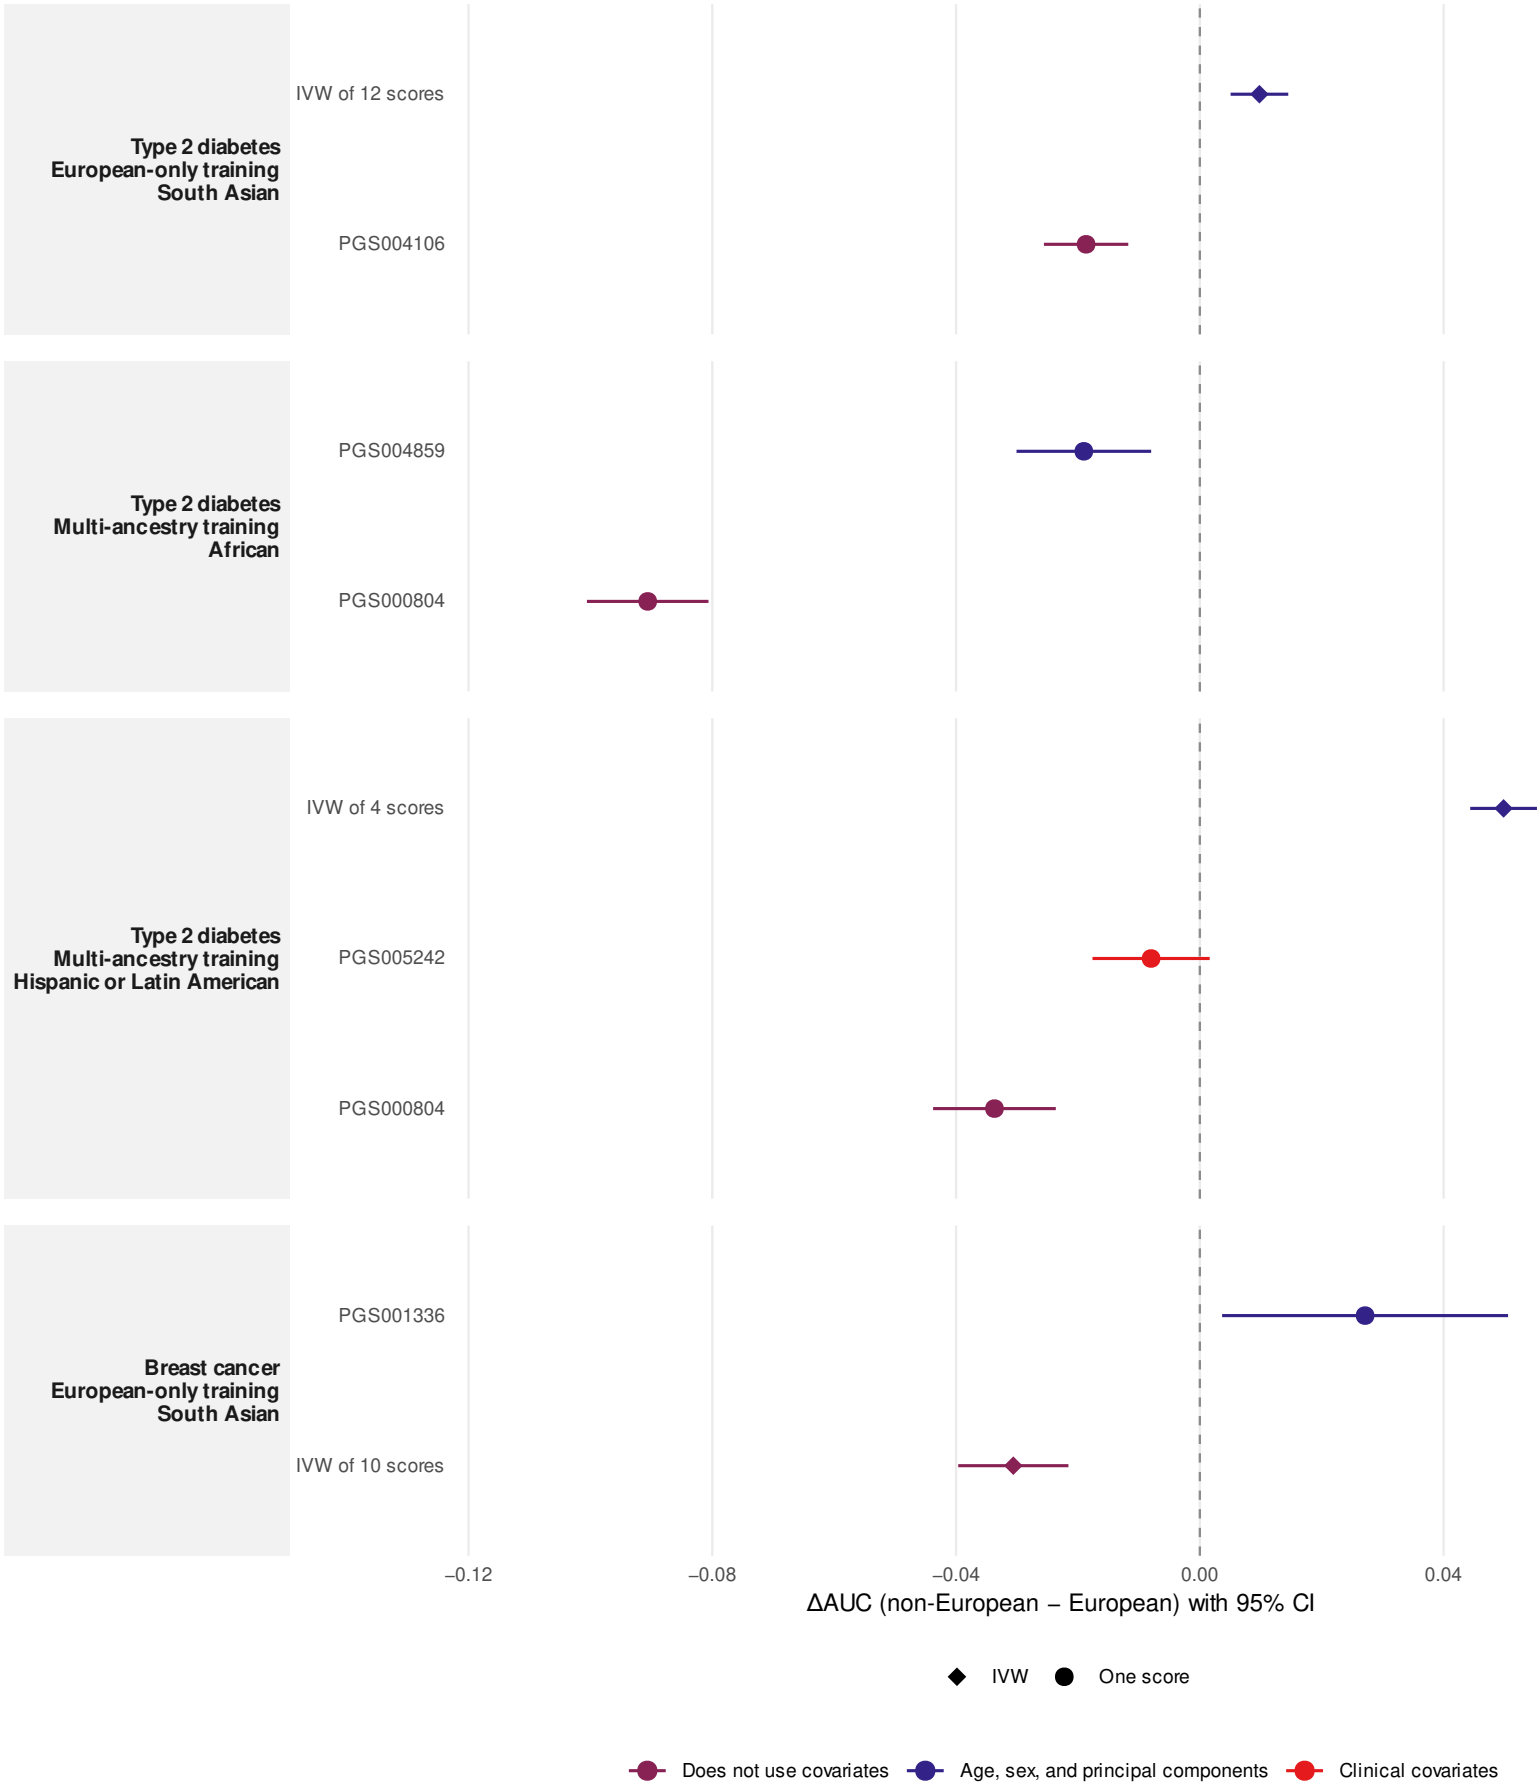
IVW of the larger covariate class, and the single score of each other class

Comparisons that include more than one covariate class. A class with several scores is their IVW. A class with one score stays that score.



The European side and the non-European side of every estimate use the same covariate class. Does not use covariates: None (PRS only). Age, sex, and principal components are separate from clinical covariates. Breast cancer, South Asian participants: IVW of 10 scores with no covariates, and PGS001336. Type 2 diabetes, South Asian participants, European-only training: IVW of 12 scores with age, sex, and principal components, and PGS004106. African participants: PGS000804 and PGS004859, one score each. Hispanic or Latin American participants: IVW of 4 scores with age, sex, and principal components, PGS000804, and PGS005242.
