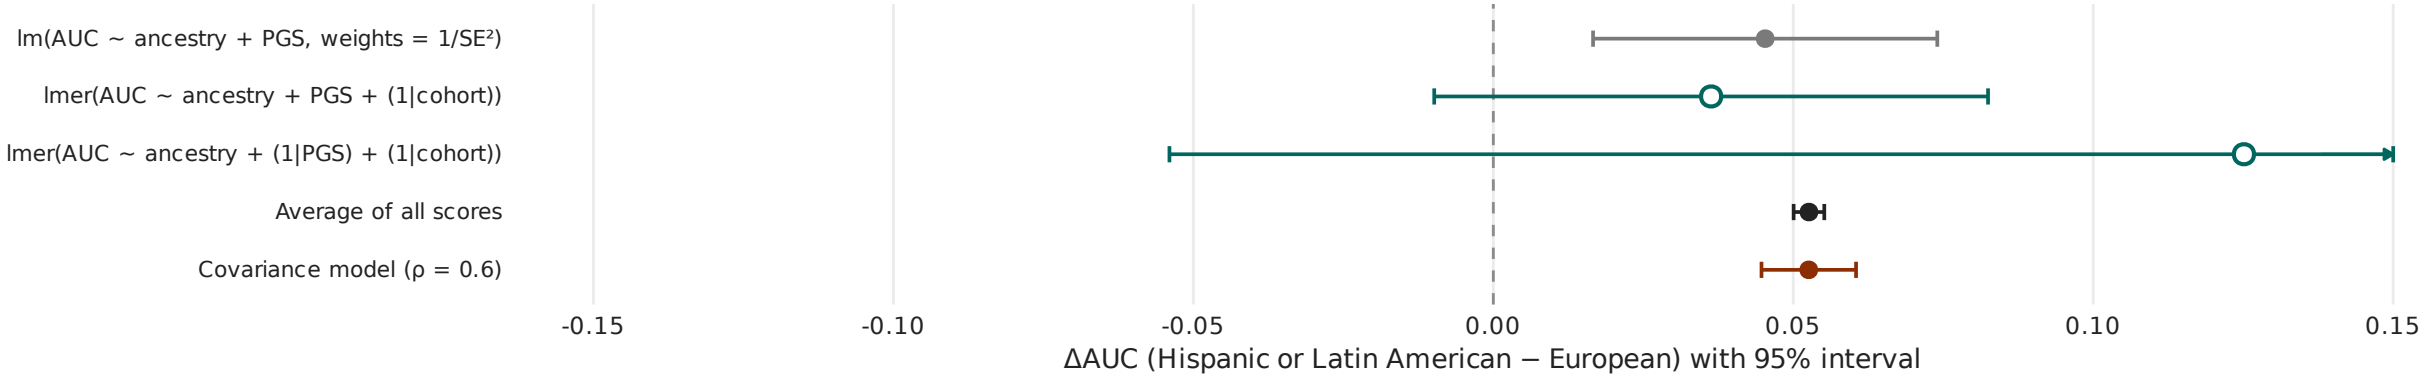
Type 2 diabetes, Hispanic or Latin American participants, European-only training

11 scores, coloured by target sample set.

Summaries. Hollow points are joint-model coefficients, not averages of the scores above.



Catalog stamp 20260923. Shared x-axis clipped at ±0.150; arrows mark intervals that run past the edge.
In (1|cohort), cohort means the sample set. The two lmer rows are ancestry coefficients from Nikolaus's joint models.
Covariance model: 0.053 (0.045 to 0.060) at ρ = 0.6. Neither comparison reports a robust interval: each is one sharing group, so degrees of freedom are too few.
