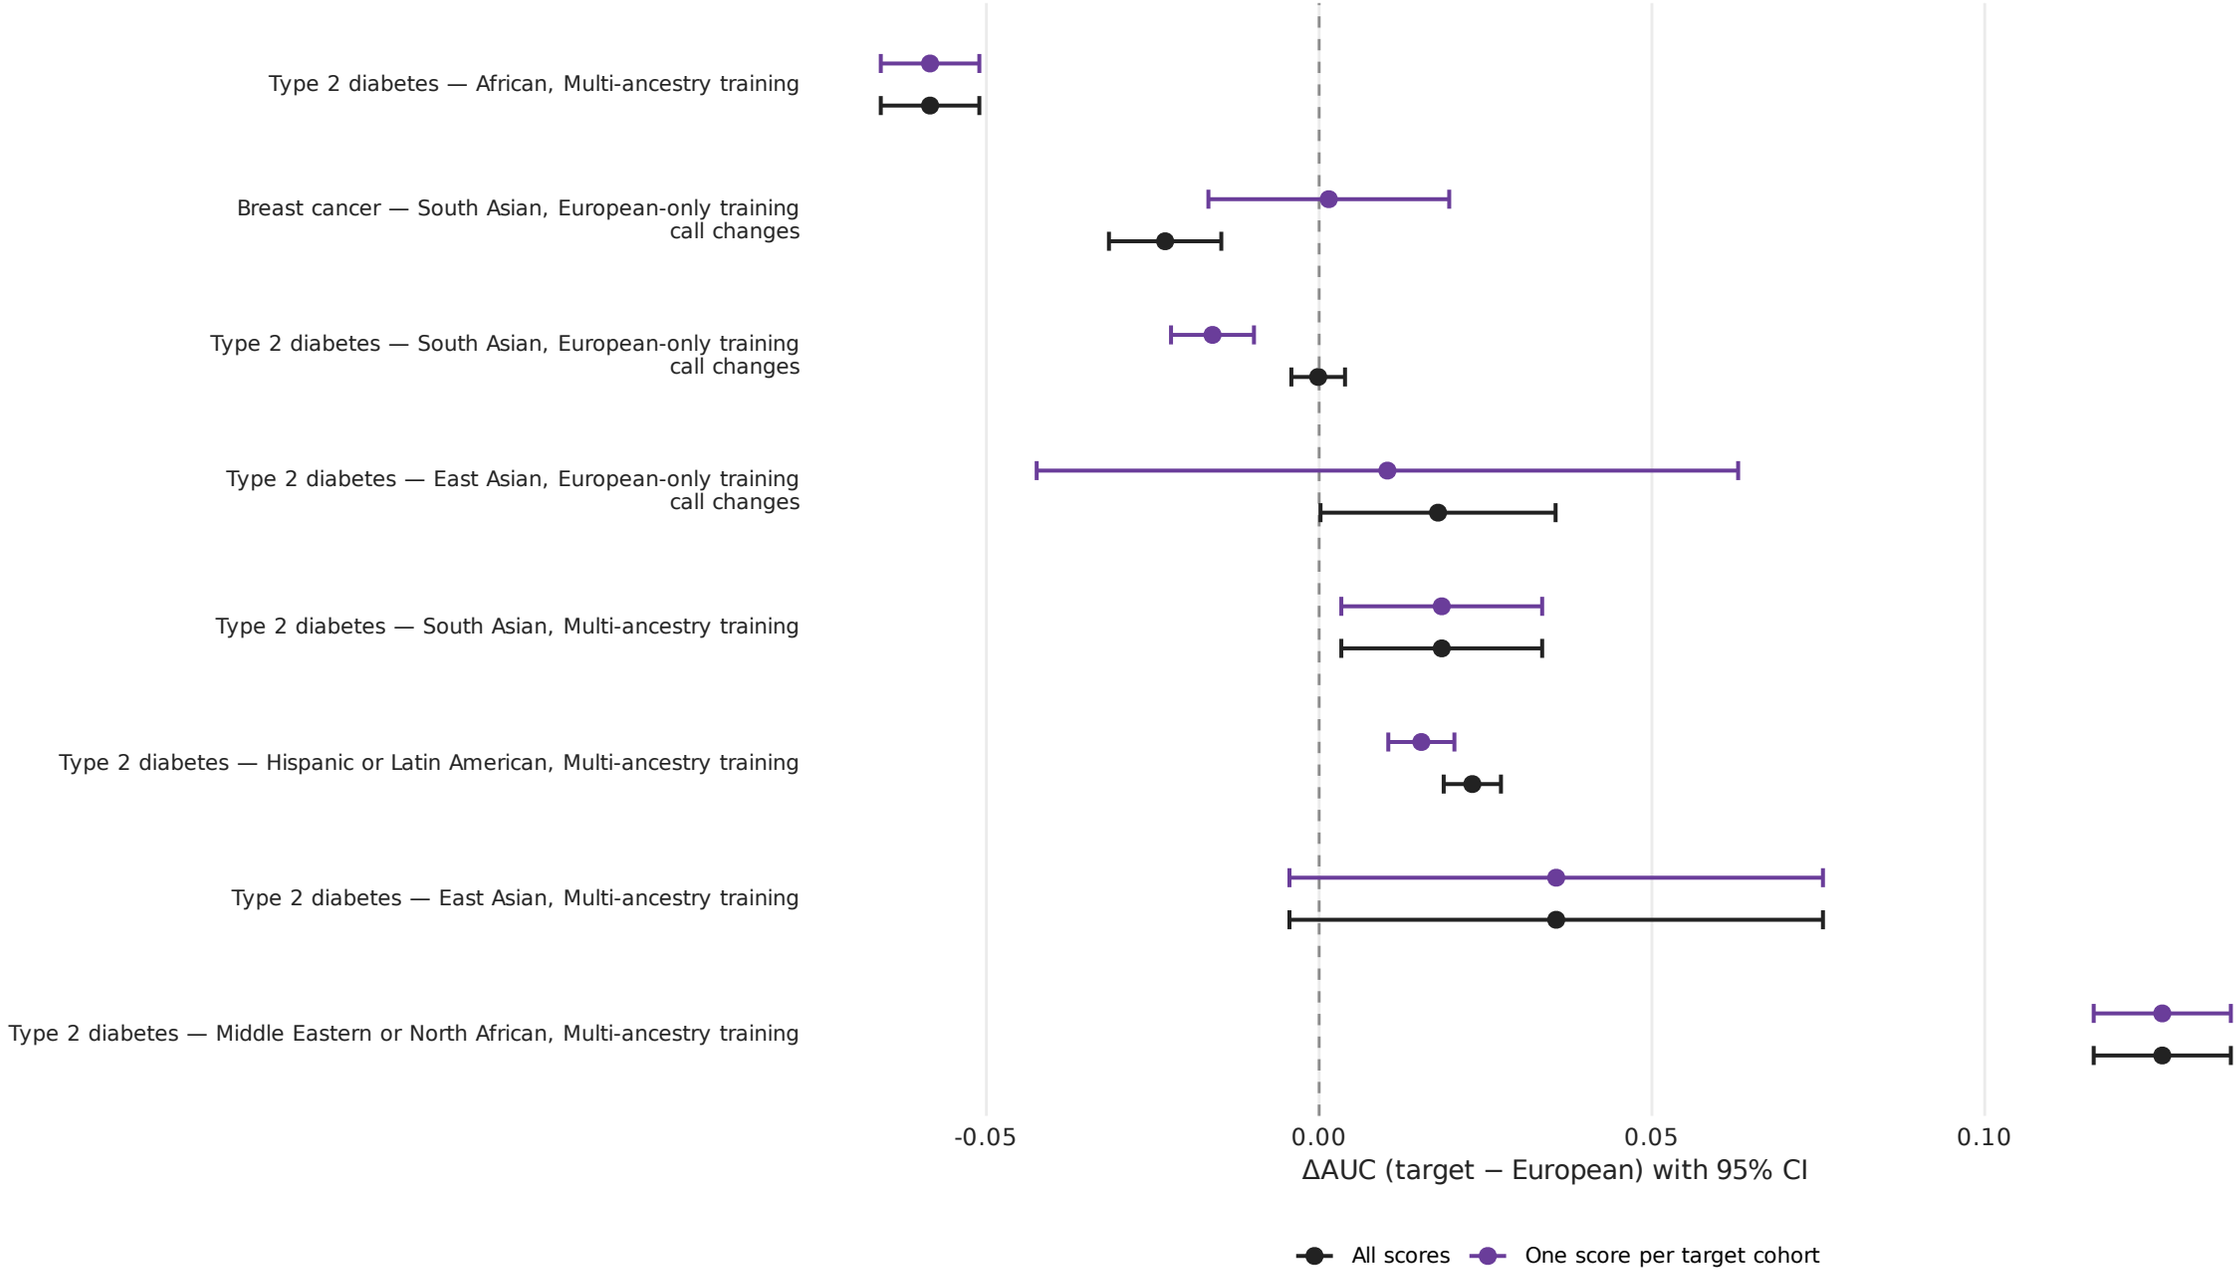
5. The eight. One score per target cohort is the check, because more than one cohort remains.

Black is every score. Purple is one score per target cohort, the lowest PGS identifier.
The cohort model Georg is looking at is the model for this panel. It is not the correction drawn in red on the previous plot.



The call changes in three: both European-only type 2 diabetes comparisons, and breast cancer in South Asian participants.
South Asian, European-only, moves from about 0 to a deficit. East Asian, European-only, and breast cancer move from excluding 0 to including it.
The other five, including Hispanic or Latin American type 2 diabetes with multi-ancestry training, keep the same call.
