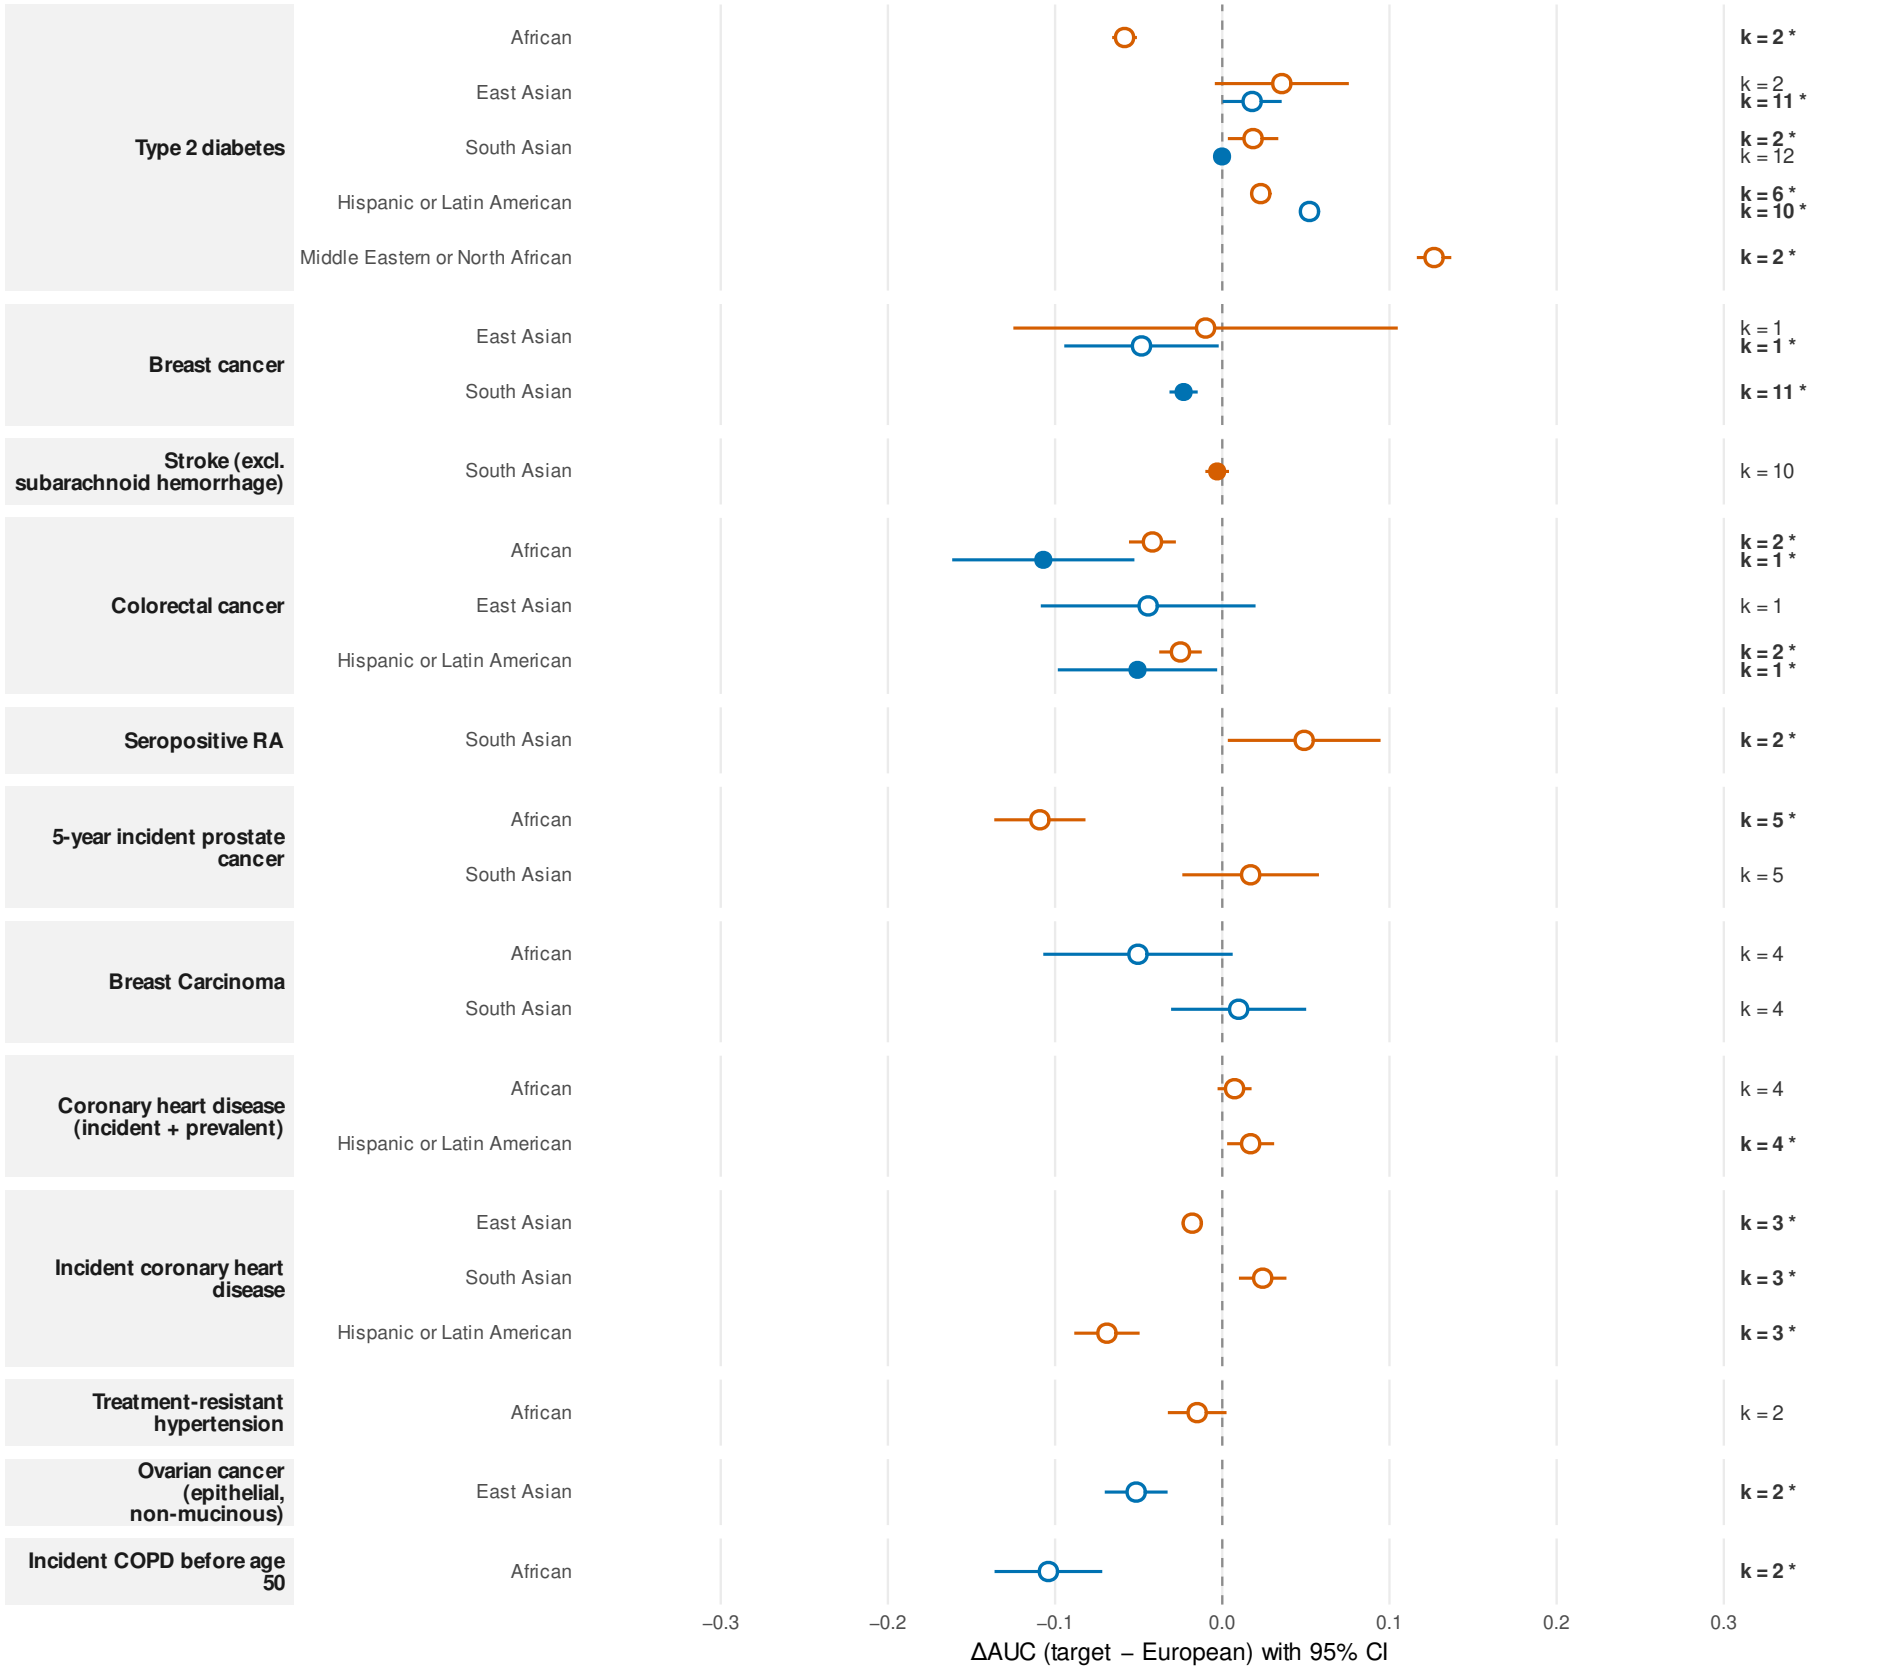
Figure 1C cells in the recovery-pack layout: within-PGS ΔAUC (target – European)

Intervals are the published delta-method standard errors. The script 08 forest remains the publication figure.



PGS training weights — Train: European-only — Train: Multi incl. EUR

Point fill — Pooled Stage-1 input — Single evaluation per side

k = number of PGS with a paired European/target estimate; * = 95% CI excludes zero.
Hollow points: every PGS in the cell has a single evaluation on each side (no Stage-1 pooling).
