

1. A pair stays in only when both sides have the same single covariate class

Coronary heart disease (incident and prevalent), multi-ancestry training, African target.
The Hispanic or Latin American cell uses the same four scores and the same keep-or-drop decisions.

Score	European class	Target class	
PGS000011	Clinical or other	Clinical or other	Kept
PGS000200	Clinical or other	Clinical or other	Kept
PGS000013	Age/sex/PCs Clinical	Clinical or other	Dropped
PGS000018	Age/sex/PCs Clinical	Clinical or other	Dropped

Classes come from the Catalog field 'Covariates Included in the Model': None (PRS only), Age/sex/PCs/technical, or Clinical or other.
PGS000013 and PGS000018 are evaluated in Europeans both in CoLaus and in the multi-site eMERGE network, so the European side is not one class.
The target side of every score is the clinical eMERGE covariate list. Matching requires one class, and the same class, on both sides.
