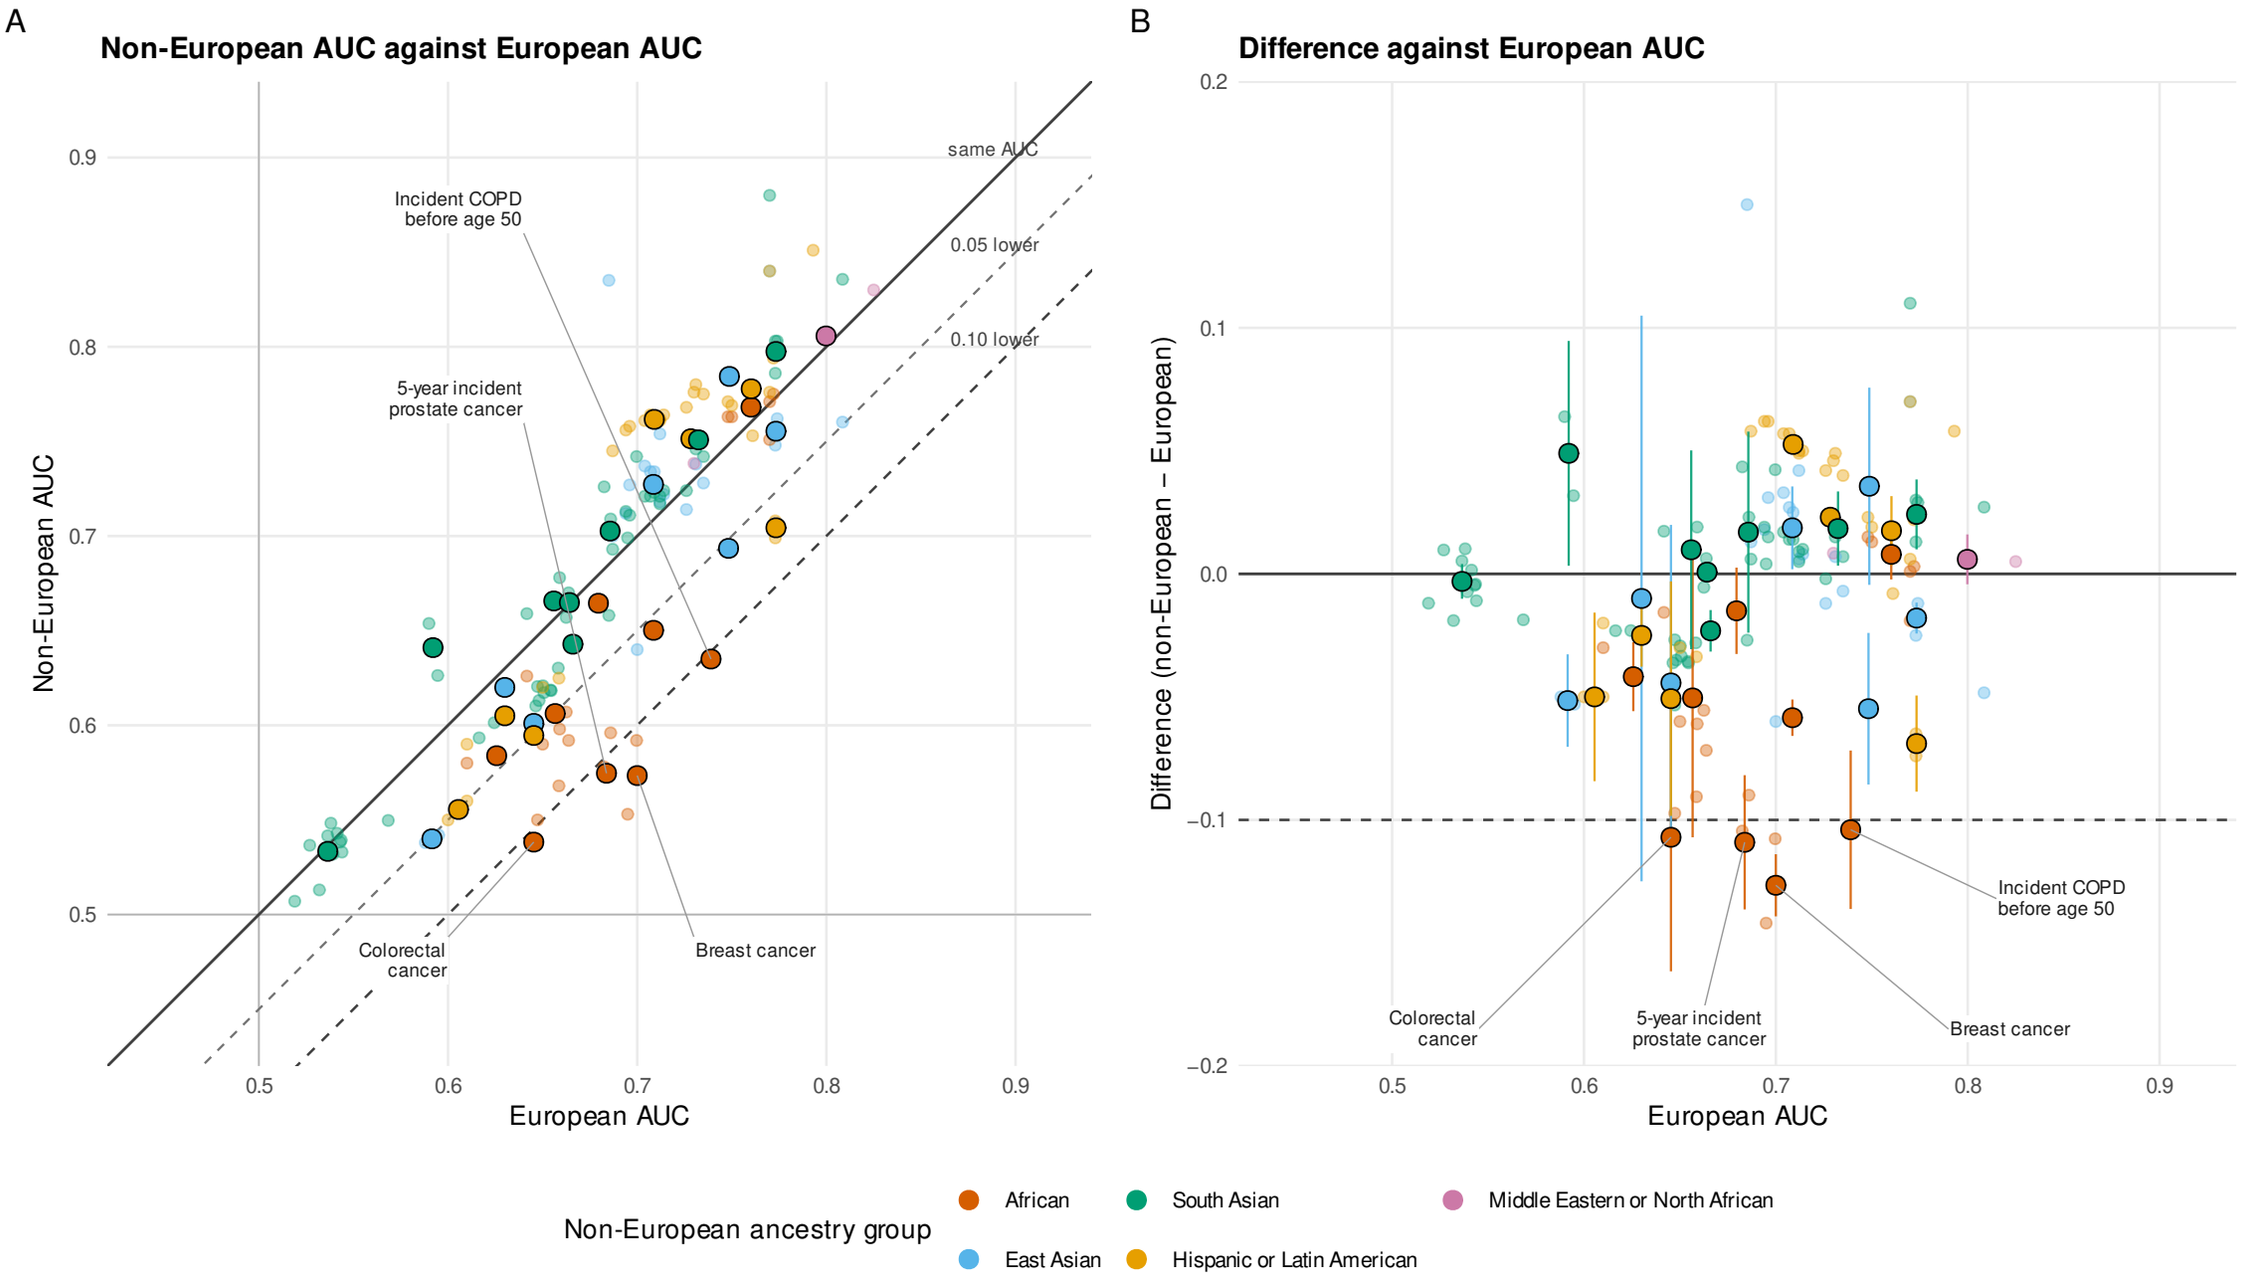
European and non-European AUC

Small points are scores. Large points are the inverse-variance weighted average of all scores in the comparison.



127 scores and 32 comparisons. The difference is the non-European AUC minus the European AUC.
Large points are the inverse-variance weighted average of all scores in the comparison.
The weights are the Figure 1C weights, so the gap between the European and non-European inverse-variance weighted averages is the Figure 1C difference.
Vertical intervals are the corrected 95% intervals for that inverse-variance weighted average. 21 of the 32 intervals exclude zero.
On the left, the solid diagonal is equal AUC, the dashed lines are 0.05 lower and 0.10 lower, and the grey lines are AUC 0.50.
On the right, the solid horizontal line is a difference of zero and the dashed line is −0.10. Labels mark the comparisons at or below a difference of −0.10.
