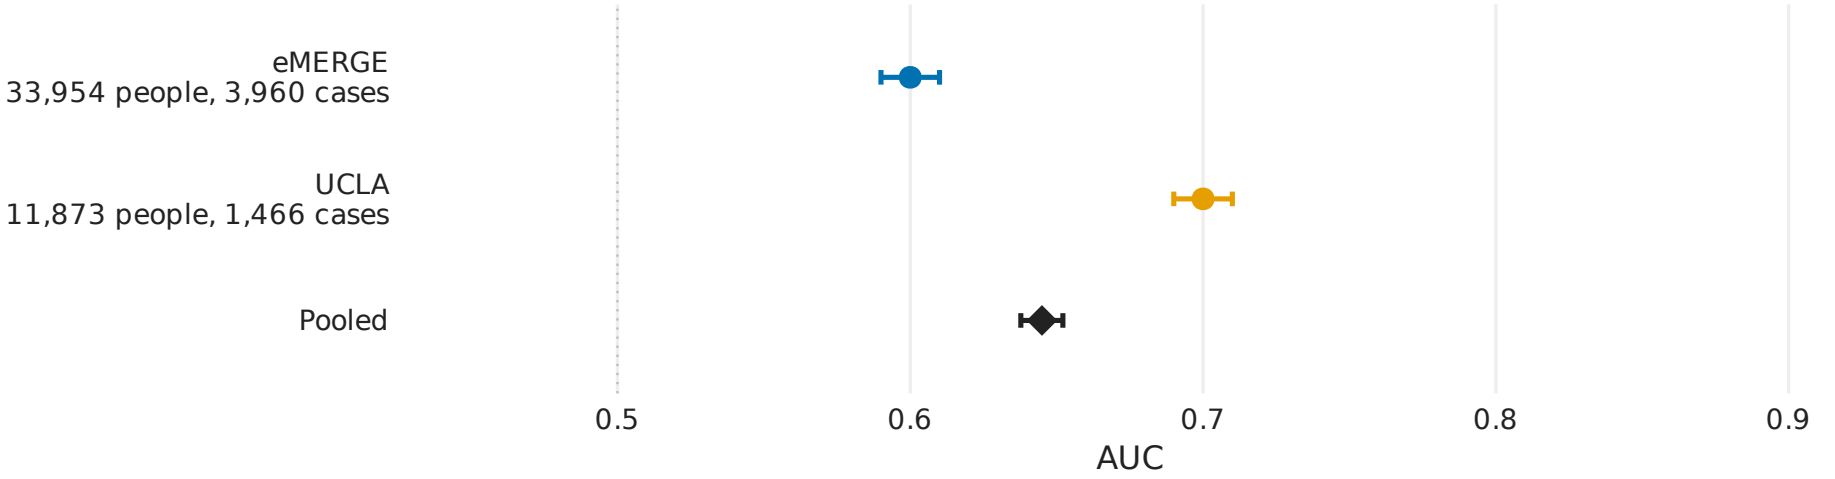
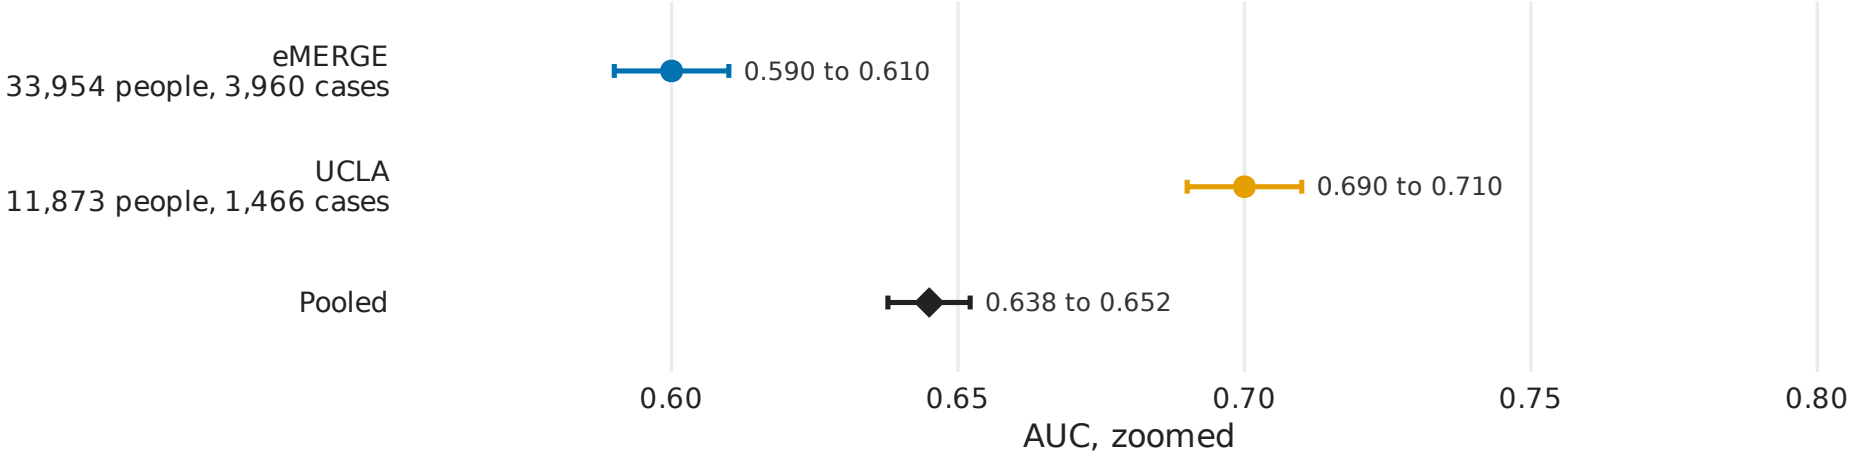
1. The two European evaluations of PGS000004

Breast cancer. Stage 1 pools evaluations that share a score and an ancestry.
These two intervals sit apart: 0.59 to 0.61, and 0.69 to 0.71.



Points are the reported AUCs. Whiskers are the reported 95% intervals. The diamond is the inverse-variance pooled AUC.
The dotted line is AUC = 0.5. The gap between the studies is large next to either interval, which is what a large Q looks like.

The same three intervals, zoomed


Neither interval reaches the other study's AUC. Q will call this disagreement.
