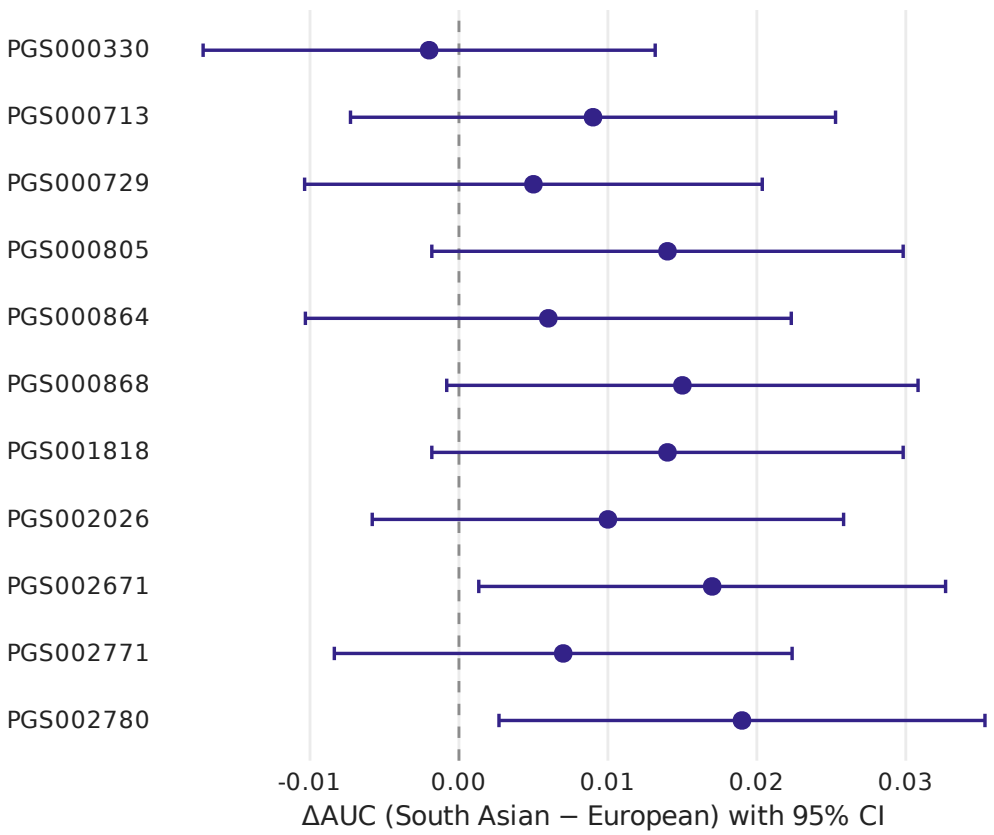
1.2 Stage 1 is not one score per sample set

Left: Stage 1 keeps one evaluation per score, sample set, ancestry, and covariate class. Different scores on PSS011749 all stay.
Right: the same eleven scores, with the one score kept, All PGS IVW, the tightest interval, and Nikolaus's lmer.

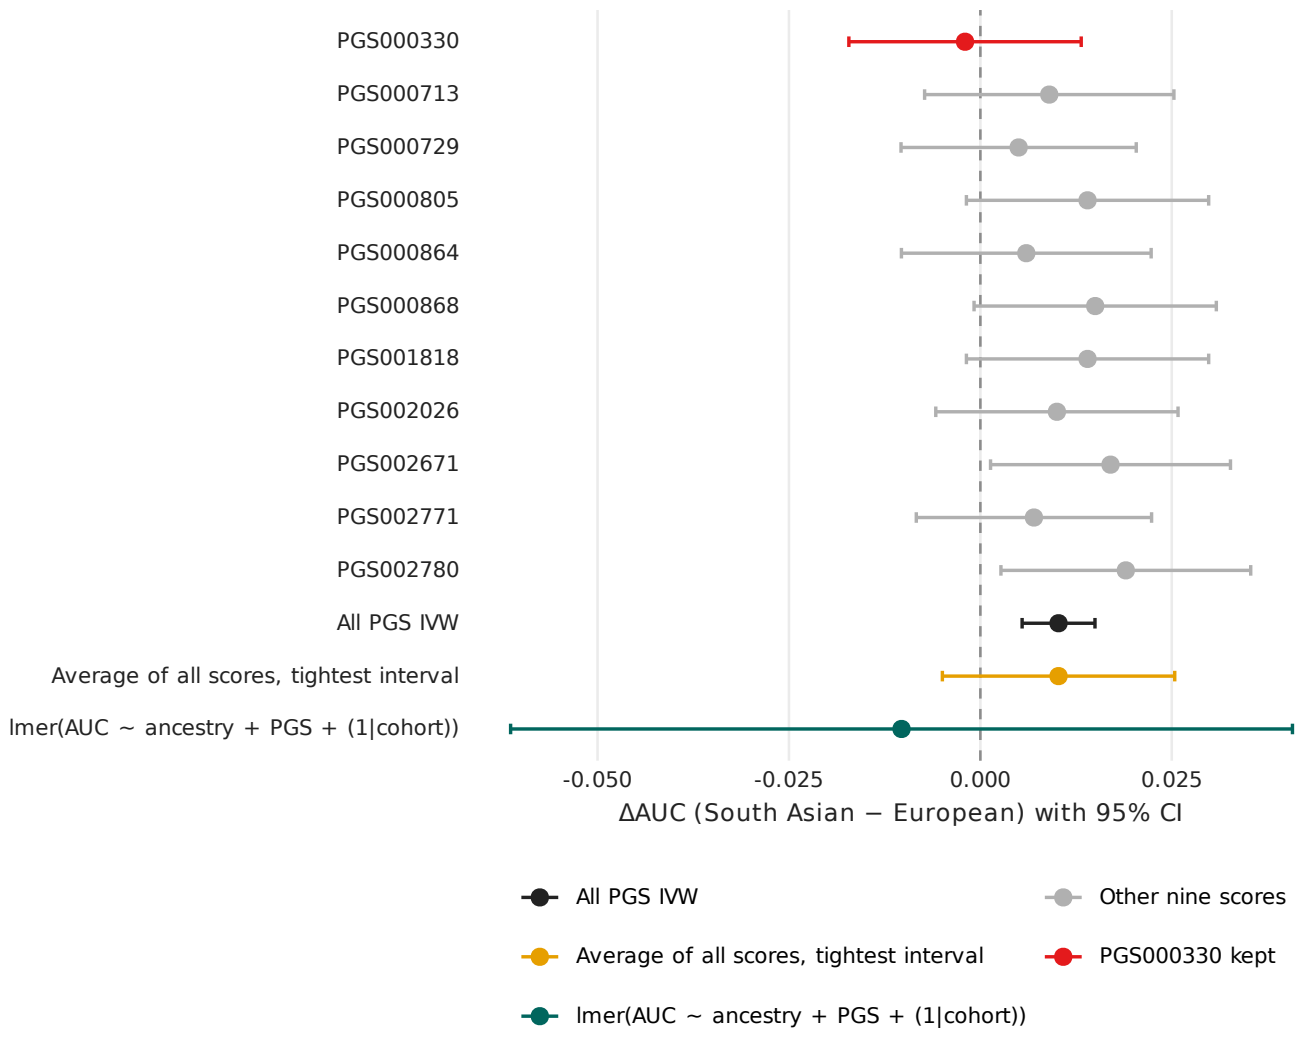
Stage 1 keeps all eleven

PSS011749, South Asian participants.
One evaluation for each of these eleven scores.



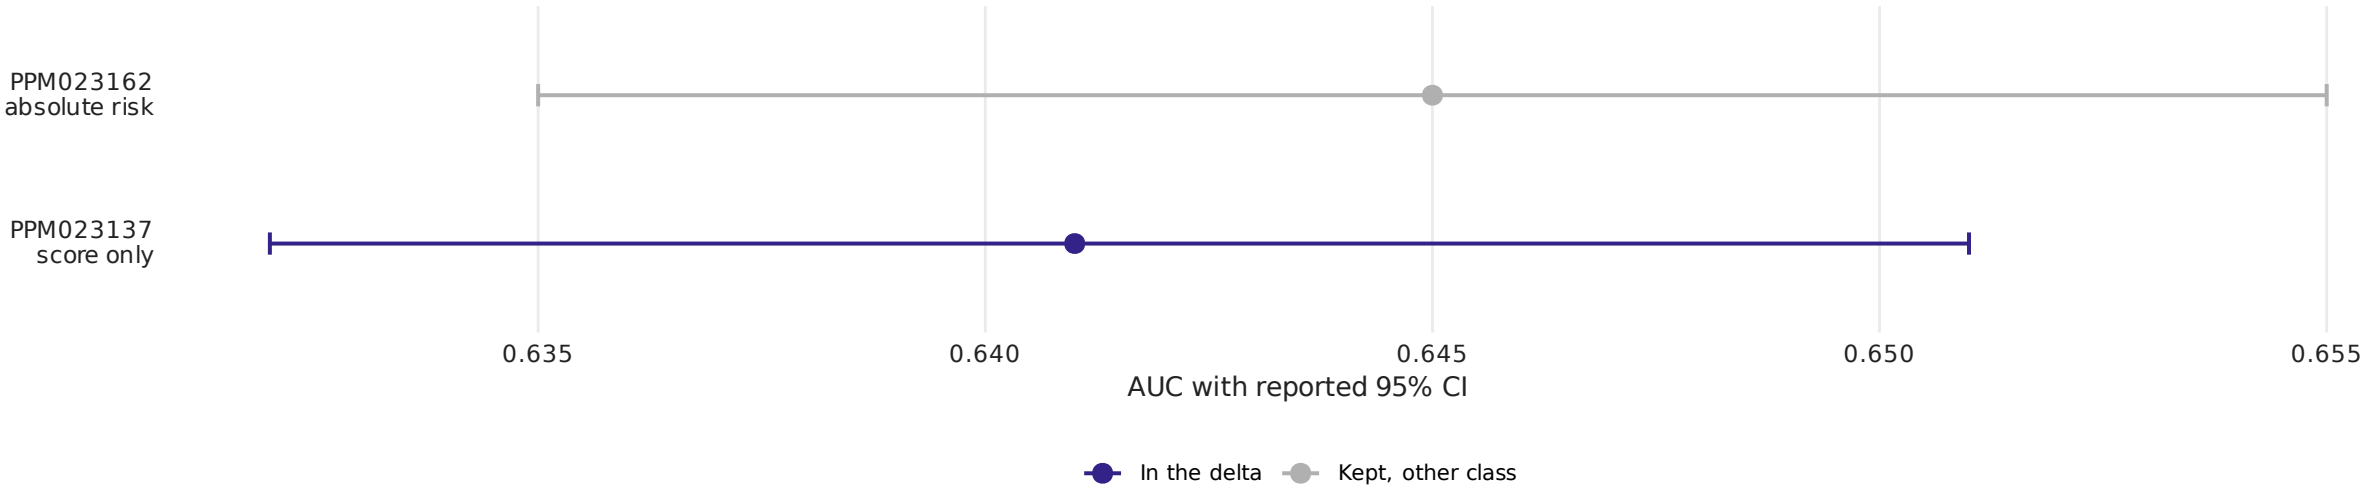
One score kept, All PGS IVW, tightest interval, and Nikolaus's lmer

Same eleven scores as on the left, all on PSS011749.
The orange row keeps the All PGS IVW average and uses the smallest standard error. No score is dropped.



Both classes are kept. The delta uses the score-only one.

PGS005345, PSS012140, European participants.
Same score, same sample set, two covariate classes.



Catalog stamp 20260923. The orange interval is the average of these eleven scores, 0.010, with the smallest standard error, 0.0077, from PGS000330. On this sample set that is also the score th
The green row is Nikolaus's lmer from the European-only fit. This figure is not on the page for Georg.
