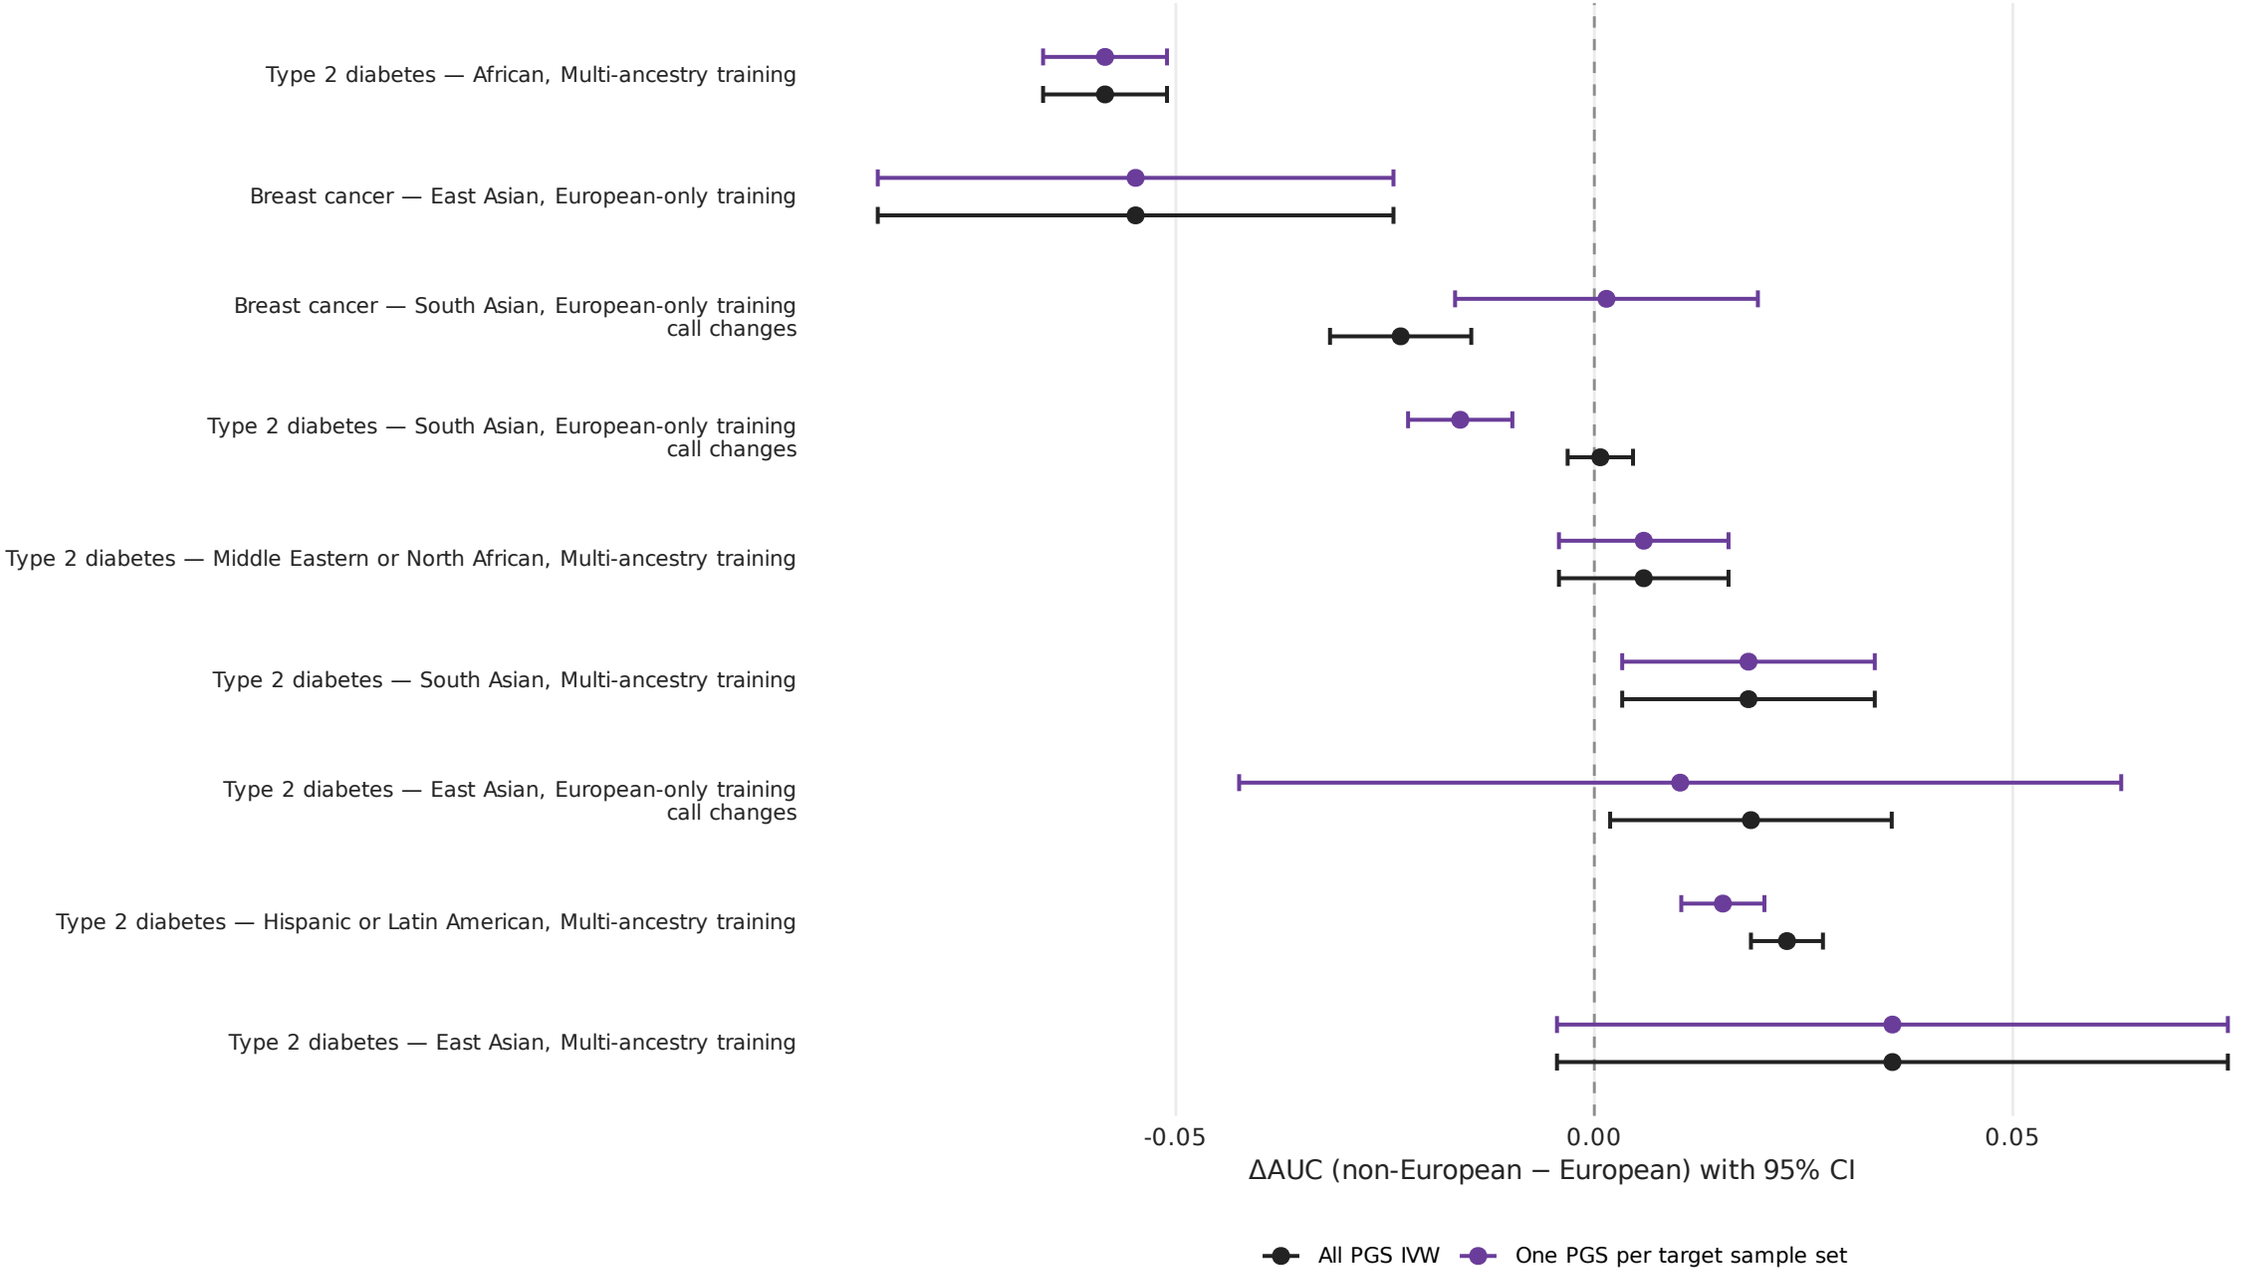
5. The nine. One PGS per target sample set is the check, because more than one sample set is in the comparison.

Black is All PGS IVW. Purple is one PGS per target sample set, the lowest PGS identifier.
The model Georg is looking at, with (1|cohort) equal to the sample set, is the model for this panel. It is not the red interval on the previous plot.



The call changes in three: both European-only type 2 diabetes comparisons, and breast cancer in South Asian participants.
South Asian, European-only, moves from about 0 to a deficit. East Asian, European-only, and breast cancer move from excluding 0 to including it.
The other six, including Hispanic or Latin American type 2 diabetes with multi-ancestry training, keep the same call.
